National Digital Addressing Platform

INSTITUTIONAL REVIEW

Institutional Reviewer Manual

Manual for reviewing evidence, readiness status, risks, and
institutional decisions in the pilot.

Document control page

Document title:	Institutional Reviewer Manual.
Language:	English.
Audience:	Ministry, municipal, and delegated reviewers who inspect readiness and governance status.
Status:	Controlled pilot training material.
Prepared for:	Equatorial Guinea National Digital Addressing pilot.
Operational support:	BeCore.

Table of contents

- 1.** How to use this manual
- 2.** Audience and responsibilities
- 3.** Training outcomes
- 4.** Key terms
- 5.** Privacy and safety rules
- 6.** Module 1: reviewer role overview
- 7.** Module 2: readiness review
- 8.** Module 3: risk and governance checks
- 9.** Module 4: decision notes
- 10.** Module 5: review closeout
- 11.** Practice exercises
- 12.** Common mistakes
- 13.** Troubleshooting
- 14.** Assessment checklist
- 15.** Reference index
- 16.** Support and contact

1. How to use this manual

This manual trains the institutional reviewer to review evidence, readiness, and governance boundaries before records move toward public use.

Use the manual in order during a guided session and later as a reference. Each module explains the main task, the correct steps, and the mistakes to avoid.

Examples are for training and do not replace future official instructions.

2. Audience and responsibilities

Ministry, municipal, and delegated reviewers who inspect readiness and governance status.

1. Perform the assigned role without taking decisions that belong to another role.
2. Use only the data needed for the work.
3. Keep the difference between review, decision, and publication clear.
4. Record observations briefly and verifiably.
5. Escalate uncertainty instead of forcing an action.

3. Training outcomes

By the end of this manual, the participant should be able to:

1. Explain the boundary of the role.
2. Follow the correct daily workflow.
3. Recognize sensitive information.
4. Keep evidence or notes understandable.
5. Know when to escalate a case.

4. Key terms

Official record: information reviewed inside the institutional workflow.

Ready for approval: status showing preparation for authorized decision.

Location evidence: information that helps confirm where a place is located.

Public release lock: control that prevents publication before authorization.

Record history: sequence of actions visible for review and audit.

5. Privacy and safety rules

Do not place passwords, full identity numbers, bank details, or unnecessary private information in notes, examples, or training screenshots.

Basic rules:

1. Use real data only inside the protected system when the role requires it.
2. Use fictional or approved examples in training.
3. Do not share screenshots with private data.
4. Do not copy protected information into public channels.
5. If a situation is sensitive, ask a supervisor.

6. Module 1: reviewer role overview

This module teaches how to separate evidence review from system administration and publication work.

Procedure:

1. Open the reviewer workflow.
2. Confirm assigned jurisdiction.
3. Read summary status first.
4. Open detailed evidence only when needed.
5. Leave technical administration to appointed admins.

Training example: The participant receives a training case related to reviewer role overview. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Approving a case without checking the reason for readiness.
2. Writing a decision note that is too vague to audit.
3. Ignoring a jurisdiction or duplicate risk.
4. Forcing a decision when policy escalation is needed.

7. Module 2: readiness review

This module teaches how to judge whether a case is ready for authorized decision.

Procedure:

1. Check registry preparation.
2. Review field evidence status.
3. Look for duplicate or boundary risks.
4. Check public release lock status.
5. Record the decision reason.

Training example: The participant receives a training case related to readiness review. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Treating a metric count as proof of approval.
2. Copying internal identifiers into public summaries.
3. Ignoring warnings because the overall count looks positive.
4. Sending an export before reviewing the content.

8. Module 3: risk and governance checks

This module teaches how to identify issues that must be resolved before public use.

Procedure:

1. Check sensitive-data exposure.
2. Check unclear location evidence.
3. Check jurisdiction mismatch.
4. Check unresolved corrections.
5. Escalate policy issues instead of forcing a decision.

Training example: The participant receives a training case related to risk and governance checks. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Approving a case without checking the reason for readiness.
2. Writing a decision note that is too vague to audit.
3. Ignoring a jurisdiction or duplicate risk.
4. Forcing a decision when policy escalation is needed.

9. Module 4: decision notes

This module teaches how to write notes that are useful without becoming legal overclaim.

Procedure:

1. State the observed reason.
2. Reference the section or evidence category.
3. Avoid personal opinions.
4. Avoid unsupported promises.
5. Keep notes short and traceable.

Training example: The participant receives a training case related to decision notes. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Approving a case without checking the reason for readiness.
2. Writing a decision note that is too vague to audit.
3. Ignoring a jurisdiction or duplicate risk.
4. Forcing a decision when policy escalation is needed.

10. Module 5: review closeout

This module teaches how to finish a review without leaving ambiguity.

Procedure:

1. Set the correct status.
2. State any remaining condition.
3. Confirm public release remains locked when required.
4. Notify the right operational contact.
5. Do not export official material prematurely.

Training example: The participant receives a training case related to review closeout. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Approving a case without checking the reason for readiness.
2. Writing a decision note that is too vague to audit.
3. Ignoring a jurisdiction or duplicate risk.
4. Forcing a decision when policy escalation is needed.

11. Practice exercises

Exercise 1: Review a training case and state what information is missing.

Exercise 2: Explain which role should act next and why.

Exercise 3: Identify a phrase that could expose sensitive information and rewrite it.

Exercise 4: Prepare a short note that helps the next reviewer.

12. Common mistakes

1. Confuse review progress with final approval.
2. Repeat the same warning in several notes.
3. Leave the case without a clear next action.
4. Use technical language when a simple explanation is enough.
5. Store evidence outside the protected workflow.

13. Troubleshooting

1. If evidence is missing, return the case to the correct role.
2. If status does not match evidence, pause progress and ask for review.
3. If sensitive information appears, remove it from public text and escalate the case.
4. If unsure, do not force a decision; record the question.
5. If the system does not respond, keep the case identifier and contact authorized support.

14. Assessment checklist

1. The participant can explain the role.
2. The participant can complete the main workflow.
3. The participant recognizes sensitive data.
4. The participant keeps notes brief and useful.
5. The participant knows when to escalate.

15. Reference index

1. Authorized support: sections 4, 5, and related modules.
2. Location evidence: sections 4, 5, and related modules.
3. Official record: sections 4, 5, and related modules.
4. Public release lock: sections 4, 5, and related modules.
5. Ready for approval: sections 4, 5, and related modules.
6. Record history: sections 4, 5, and related modules.
7. Sensitive data: sections 4, 5, and related modules.

16. Support and contact

For help during the controlled pilot, contact the operational support team indicated by BeCore or by the institution responsible for the training.

When asking for help, include the case identifier if available, a short description of the problem, and the role you are working from. Do not include passwords or full sensitive data.

If the responsible institution issues an updated rule or procedure, that instruction takes priority.
