

REPUBLIC OF EQUATORIAL GUINEA

National Digital Addressing Platform

PILOT TRAINING

Pilot Training Manual

Manual for organizing pilot training sessions, exercises,
assessment, and follow-up.

Document control page

Document title:	Pilot Training Manual.
Language:	English.
Audience:	Trainers, supervisors, and coordinators who run pilot training sessions.
Status:	Controlled pilot training material.
Prepared for:	Equatorial Guinea National Digital Addressing pilot.
Operational support:	BeCore.

Table of contents

- 1.** How to use this manual
- 2.** Audience and responsibilities
- 3.** Training outcomes
- 4.** Key terms
- 5.** Privacy and safety rules
- 6.** Module 1: training session setup
- 7.** Module 2: teaching the workflow
- 8.** Module 3: practice facilitation
- 9.** Module 4: assessment
- 10.** Module 5: post-training follow-up
- 11.** Practice exercises
- 12.** Common mistakes
- 13.** Troubleshooting
- 14.** Assessment checklist
- 15.** Reference index
- 16.** Support and contact

1. How to use this manual

This manual trains the trainer to run structured training sessions that teach the right workflows without creating false official expectations.

Use the manual in order during a guided session and later as a reference. Each module explains the main task, the correct steps, and the mistakes to avoid.

Examples are for training and do not replace future official instructions.

2. Audience and responsibilities

Trainers, supervisors, and coordinators who run pilot training sessions.

1. Perform the assigned role without taking decisions that belong to another role.
2. Use only the data needed for the work.
3. Keep the difference between review, decision, and publication clear.
4. Record observations briefly and verifiably.
5. Escalate uncertainty instead of forcing an action.

3. Training outcomes

By the end of this manual, the participant should be able to:

1. Explain the boundary of the role.
2. Follow the correct daily workflow.
3. Recognize sensitive information.
4. Keep evidence or notes understandable.
5. Know when to escalate a case.

4. Key terms

Official record: information reviewed inside the institutional workflow.

Ready for approval: status showing preparation for authorized decision.

Location evidence: information that helps confirm where a place is located.

Public release lock: control that prevents publication before authorization.

Record history: sequence of actions visible for review and audit.

5. Privacy and safety rules

Do not place passwords, full identity numbers, bank details, or unnecessary private information in notes, examples, or training screenshots.

Basic rules:

1. Use real data only inside the protected system when the role requires it.
2. Use fictional or approved examples in training.
3. Do not share screenshots with private data.
4. Do not copy protected information into public channels.
5. If a situation is sensitive, ask a supervisor.

6. Module 1: training session setup

This module teaches how to prepare a clear session before participants arrive.

Procedure:

1. Confirm the audience and role focus.
2. Prepare safe training examples.
3. Check projector or printed materials.
4. State the controlled pilot boundary.
5. Avoid using real private records.

Training example: The participant receives a training case related to training session setup. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Sharing access details outside the approved channel.
2. Leaving old access active after a role changes.
3. Changing more than one control before verifying the result.
4. Recording secret values in notes or screenshots.

7. Module 2: teaching the workflow

This module teaches how to explain the platform as a sequence of roles.

Procedure:

1. Start with public submission.
2. Show field evidence.
3. Explain registry preparation.
4. Explain institutional review.
5. Finish with publication controls.

Training example: The participant receives a training case related to teaching the workflow. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Skipping the role boundary because the case looks simple.
2. Leaving the next action unclear.
3. Adding private details that the next role does not need.
4. Promising an outcome that belongs to another workflow.

8. Module 3: practice facilitation

This module teaches how to run exercises without exposing sensitive data.

Procedure:

1. Assign a training scenario.
2. Let participants complete steps in order.
3. Pause for questions after each module.
4. Correct misunderstandings immediately.
5. Keep examples fictional or approved.

Training example: The participant receives a training case related to practice facilitation. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Skipping the role boundary because the case looks simple.
2. Leaving the next action unclear.
3. Adding private details that the next role does not need.
4. Promising an outcome that belongs to another workflow.

9. Module 4: assessment

This module teaches how to check whether participants can perform the workflow.

Procedure:

1. Ask participants to explain their role boundary.
2. Review completed exercise answers.
3. Check privacy understanding.
4. Check publication-boundary understanding.
5. Record follow-up needs.

Training example: The participant receives a training case related to assessment. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Skipping the role boundary because the case looks simple.
2. Leaving the next action unclear.
3. Adding private details that the next role does not need.
4. Promising an outcome that belongs to another workflow.

10. Module 5: post-training follow-up

This module teaches how to turn the session into operational readiness.

Procedure:

1. Collect feedback.
2. Note recurring confusion.
3. Update training materials when approved.
4. Schedule role-specific refreshers.
5. Share only approved documents.

Training example: The participant receives a training case related to post-training follow-up. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Using real private records as classroom examples.
2. Explaining every role at once until the workflow becomes confusing.
3. Skipping assessment because the session felt clear.
4. Letting participants leave with different meanings for publication.

11. Practice exercises

Exercise 1: Review a training case and state what information is missing.

Exercise 2: Explain which role should act next and why.

Exercise 3: Identify a phrase that could expose sensitive information and rewrite it.

Exercise 4: Prepare a short note that helps the next reviewer.

12. Common mistakes

1. Confuse review progress with final approval.
2. Repeat the same warning in several notes.
3. Leave the case without a clear next action.
4. Use technical language when a simple explanation is enough.
5. Store evidence outside the protected workflow.

13. Troubleshooting

1. If evidence is missing, return the case to the correct role.
2. If status does not match evidence, pause progress and ask for review.
3. If sensitive information appears, remove it from public text and escalate the case.
4. If unsure, do not force a decision; record the question.
5. If the system does not respond, keep the case identifier and contact authorized support.

14. Assessment checklist

1. The participant can explain the role.
2. The participant can complete the main workflow.
3. The participant recognizes sensitive data.
4. The participant keeps notes brief and useful.
5. The participant knows when to escalate.

15. Reference index

1. Authorized support: sections 4, 5, and related modules.
2. Location evidence: sections 4, 5, and related modules.
3. Official record: sections 4, 5, and related modules.
4. Public release lock: sections 4, 5, and related modules.
5. Ready for approval: sections 4, 5, and related modules.
6. Record history: sections 4, 5, and related modules.
7. Sensitive data: sections 4, 5, and related modules.

16. Support and contact

For help during the controlled pilot, contact the operational support team indicated by BeCore or by the institution responsible for the training.

When asking for help, include the case identifier if available, a short description of the problem, and the role you are working from. Do not include passwords or full sensitive data.

If the responsible institution issues an updated rule or procedure, that instruction takes priority.
