Date: June 2026

FORMAL FORWARDING NOTE

To: The Ministry of Transportation, Republic of Equatorial Guinea

Subject: Submission of proposal for a National Digital Addressing System

At the request of the Vice President, I respectfully submit the attached proposal to the Ministry of Transportation for consideration.

The purpose of this submission is to present a serious, government-owned path for creating a national address registry, geospatial service layer, field-capture model, and operational rollout structure that can support public administration, emergency response, utilities, logistics, planning, and long-term digital modernization.

This proposal is intentionally framed as national infrastructure rather than a narrow software product. It is designed to help the State define standards correctly, prove value through a disciplined pilot, and build the institutional and operational foundations required for trusted nationwide expansion.

I would be honored to present the proposal formally, clarify the recommended pilot scope, and support any next-stage discussion concerning standards, governance, implementation structure, or national rollout planning.

Thank you for your time, consideration, and service to the Republic of Equatorial Guinea.

Respectfully,

Benjamin Bob Bechiro
Project Initiator
