

REPUBLIC OF EQUATORIAL GUINEA

National Digital Addressing Platform

FIELD TRAINING

Field Officer Manual

Operational manual for capturing location evidence, field notes,
and safe checks during the controlled pilot.

Document control page

Document title: Field Officer Manual.

Language: English.

Audience: Field teams, survey officers, and authorized staff who collect location evidence.

Status: Controlled pilot training material.

Prepared for: Equatorial Guinea National Digital Addressing pilot.

Operational support: BeCore.

Table of contents

- 1.** How to use this manual
- 2.** Audience and responsibilities
- 3.** Training outcomes
- 4.** Key terms
- 5.** Privacy and safety rules
- 6.** Module 1: field workflow overview
- 7.** Module 2: capturing GPS and map evidence
- 8.** Module 3: field notes and evidence quality
- 9.** Module 4: handoff to registry review
- 10.** Module 5: safety and escalation
- 11.** Practice exercises
- 12.** Common mistakes
- 13.** Troubleshooting
- 14.** Assessment checklist
- 15.** Reference index
- 16.** Support and contact

1. How to use this manual

This manual trains the field officer to capture reliable location evidence without exposing private information or creating unofficial records.

Use the manual in order during a guided session and later as a reference. Each module explains the main task, the correct steps, and the mistakes to avoid.

Examples are for training and do not replace future official instructions.

2. Audience and responsibilities

Field teams, survey officers, and authorized staff who collect location evidence.

1. Perform the assigned role without taking decisions that belong to another role.
2. Use only the data needed for the work.
3. Keep the difference between review, decision, and publication clear.
4. Record observations briefly and verifiably.
5. Escalate uncertainty instead of forcing an action.

3. Training outcomes

By the end of this manual, the participant should be able to:

- 1.** Explain the boundary of the role.
- 2.** Follow the correct daily workflow.
- 3.** Recognize sensitive information.
- 4.** Keep evidence or notes understandable.
- 5.** Know when to escalate a case.

4. Key terms

Official record: information reviewed inside the institutional workflow.

Ready for approval: status showing preparation for authorized decision.

Location evidence: information that helps confirm where a place is located.

Public release lock: control that prevents publication before authorization.

Record history: sequence of actions visible for review and audit.

5. Privacy and safety rules

Do not place passwords, full identity numbers, bank details, or unnecessary private information in notes, examples, or training screenshots.

Basic rules:

- 1.** Use real data only inside the protected system when the role requires it.
- 2.** Use fictional or approved examples in training.
- 3.** Do not share screenshots with private data.
- 4.** Do not copy protected information into public channels.
- 5.** If a situation is sensitive, ask a supervisor.

6. Module 1: field workflow overview

This module teaches how to understand how field evidence supports review, registry preparation, and later approval.

Procedure:

1. Confirm assignment details before travel.
2. Capture the point or route evidence at the actual location.
3. Record simple field notes that explain what was observed.
4. Submit evidence through the protected workflow.
5. Leave approval decisions to registry and authorized reviewers.

Training example: The participant receives a training case related to field workflow overview. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Skipping the role boundary because the case looks simple.
2. Leaving the next action unclear.
3. Adding private details that the next role does not need.
4. Promising an outcome that belongs to another workflow.

7. Module 2: capturing GPS and map evidence

This module teaches how to capture points, road stretches, and building references with enough accuracy for review.

Procedure:

1. Stand at the correct entrance or observed feature when safe.
2. Wait for the location reading to stabilize.
3. Check whether the map point matches the physical place.
4. Record accuracy notes when the point is uncertain.
5. Do not move the point to make a case look approved.

Training example: The participant receives a training case related to capturing GPS and map evidence. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Accepting a weak map point without checking the physical location.
2. Changing evidence to make the case look easier than it is.
3. Forgetting to note uncertainty when the signal is poor.
4. Treating a field reading as an approval decision.

8. Module 3: field notes and evidence quality

This module teaches how to write notes that help reviewers without adding unnecessary private data.

Procedure:

1. Describe the observable feature.
2. Include nearby landmarks only when useful.
3. Avoid full identity numbers and private household details.
4. Mark uncertainty clearly.
5. Submit corrections when the original assignment is wrong.

Training example: The participant receives a training case related to field notes and evidence quality. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Skipping the role boundary because the case looks simple.
2. Leaving the next action unclear.
3. Adding private details that the next role does not need.
4. Promising an outcome that belongs to another workflow.

9. Module 4: handoff to registry review

This module teaches how to send evidence forward without turning field work into approval work.

Procedure:

1. Complete required field fields.
2. Attach or reference permitted evidence only.
3. Submit the case for registry review.
4. Record blockers plainly.
5. Do not promise publication to residents or businesses.

Training example: The participant receives a training case related to handoff to registry review. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Approving a case without checking the reason for readiness.
2. Writing a decision note that is too vague to audit.
3. Ignoring a jurisdiction or duplicate risk.
4. Forcing a decision when policy escalation is needed.

10. Module 5: safety and escalation

This module teaches how to handle difficult locations, access limits, and sensitive situations responsibly.

Procedure:

1. Stop if the field visit becomes unsafe.
2. Do not force access to private property.
3. Report blocked access through the workflow.
4. Ask a supervisor before handling sensitive sites.
5. Preserve the chain of review.

Training example: The participant receives a training case related to safety and escalation. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Skipping the role boundary because the case looks simple.
2. Leaving the next action unclear.
3. Adding private details that the next role does not need.
4. Promising an outcome that belongs to another workflow.

11. Practice exercises

Exercise 1: Review a training case and state what information is missing.

Exercise 2: Explain which role should act next and why.

Exercise 3: Identify a phrase that could expose sensitive information and rewrite it.

Exercise 4: Prepare a short note that helps the next reviewer.

12. Common mistakes

1. Confuse review progress with final approval.
2. Repeat the same warning in several notes.
3. Leave the case without a clear next action.
4. Use technical language when a simple explanation is enough.
5. Store evidence outside the protected workflow.

13. Troubleshooting

1. If evidence is missing, return the case to the correct role.
2. If status does not match evidence, pause progress and ask for review.
3. If sensitive information appears, remove it from public text and escalate the case.
4. If unsure, do not force a decision; record the question.
5. If the system does not respond, keep the case identifier and contact authorized support.

14. Assessment checklist

1. The participant can explain the role.
2. The participant can complete the main workflow.
3. The participant recognizes sensitive data.
4. The participant keeps notes brief and useful.
5. The participant knows when to escalate.

15. Reference index

1. Authorized support: sections 4, 5, and related modules.
2. Location evidence: sections 4, 5, and related modules.
3. Official record: sections 4, 5, and related modules.
4. Public release lock: sections 4, 5, and related modules.
5. Ready for approval: sections 4, 5, and related modules.
6. Record history: sections 4, 5, and related modules.
7. Sensitive data: sections 4, 5, and related modules.

16. Support and contact

For help during the controlled pilot, contact the operational support team indicated by BeCore or by the institution responsible for the training.

When asking for help, include the case identifier if available, a short description of the problem, and the role you are working from. Do not include passwords or full sensitive data.

If the responsible institution issues an updated rule or procedure, that instruction takes priority.
