

REPUBLIC OF EQUATORIAL GUINEA

National Digital Addressing Platform

OFFICIAL ISSUANCE

Publication and Official Issuance Guide

Guide for understanding publication locks, official issuance, certificates, signage, and exports.

Document control page

Document title: Publication and Official Issuance Guide.

Language: English.

Audience: Approval authorities and administrators who handle public release, certificates, signage, and exports.

Status: Controlled pilot training material.

Prepared for: Equatorial Guinea National Digital Addressing pilot.

Operational support: BeCore.

Table of contents

- 1.** How to use this manual
- 2.** Audience and responsibilities
- 3.** Training outcomes
- 4.** Key terms
- 5.** Privacy and safety rules
- 6.** Module 1: publication boundary
- 7.** Module 2: official extracts and certificates
- 8.** Module 3: signage readiness
- 9.** Module 4: exports and public data
- 10.** Module 5: reversal and correction
- 11.** Practice exercises
- 12.** Common mistakes
- 13.** Troubleshooting
- 14.** Assessment checklist
- 15.** Reference index
- 16.** Support and contact

1. How to use this manual

This manual trains the publication authority to understand when information may become public and how official issuance remains controlled.

Use the manual in order during a guided session and later as a reference. Each module explains the main task, the correct steps, and the mistakes to avoid.

Examples are for training and do not replace future official instructions.

2. Audience and responsibilities

Approval authorities and administrators who handle public release, certificates, signage, and exports.

- 1.** Perform the assigned role without taking decisions that belong to another role.
- 2.** Use only the data needed for the work.
- 3.** Keep the difference between review, decision, and publication clear.
- 4.** Record observations briefly and verifiably.
- 5.** Escalate uncertainty instead of forcing an action.

3. Training outcomes

By the end of this manual, the participant should be able to:

- 1.** Explain the boundary of the role.
- 2.** Follow the correct daily workflow.
- 3.** Recognize sensitive information.
- 4.** Keep evidence or notes understandable.
- 5.** Know when to escalate a case.

4. Key terms

Official record: information reviewed inside the institutional workflow.

Ready for approval: status showing preparation for authorized decision.

Location evidence: information that helps confirm where a place is located.

Public release lock: control that prevents publication before authorization.

Record history: sequence of actions visible for review and audit.

5. Privacy and safety rules

Do not place passwords, full identity numbers, bank details, or unnecessary private information in notes, examples, or training screenshots.

Basic rules:

- 1.** Use real data only inside the protected system when the role requires it.
- 2.** Use fictional or approved examples in training.
- 3.** Do not share screenshots with private data.
- 4.** Do not copy protected information into public channels.
- 5.** If a situation is sensitive, ask a supervisor.

6. Module 1: publication boundary

This module teaches how to distinguish review progress from public release.

Procedure:

1. Confirm the record is prepared.
2. Confirm authorized decision is complete.
3. Check that public release lock can be lifted.
4. Avoid publishing training or test records.
5. Keep non-public records internal.

Training example: The participant receives a training case related to publication boundary. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Preparing public material before authorization is complete.
2. Using training records in official outputs.
3. Exporting internal notes with public data.
4. Reissuing a document without correcting the source record.

7. Module 2: official extracts and certificates

This module teaches how to issue documents only from approved information.

Procedure:

1. Confirm the official record status.
2. Check public-safe fields.
3. Generate only approved outputs.
4. Review the document before sharing.
5. Record the issuance action.

Training example: The participant receives a training case related to official extracts and certificates. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Preparing public material before authorization is complete.
2. Using training records in official outputs.
3. Exporting internal notes with public data.
4. Reissuing a document without correcting the source record.

8. Module 3: signage readiness

This module teaches how to treat signage as a later official step.

Procedure:

1. Confirm publication status.
2. Confirm physical location evidence.
3. Check jurisdiction and code details.
4. Prepare signage only after approval.
5. Avoid printing draft signage.

Training example: The participant receives a training case related to signage readiness. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Preparing public material before authorization is complete.
2. Using training records in official outputs.
3. Exporting internal notes with public data.
4. Reissuing a document without correcting the source record.

9. Module 4: exports and public data

This module teaches how to share only approved public data.

Procedure:

1. Select the approved export path.
2. Exclude internal notes and private details.
3. Label controlled pilot outputs correctly.
4. Verify the file before release.
5. Keep an activity record.

Training example: The participant receives a training case related to exports and public data. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Skipping the role boundary because the case looks simple.
2. Leaving the next action unclear.
3. Adding private details that the next role does not need.
4. Promising an outcome that belongs to another workflow.

10. Module 5: reversal and correction

This module teaches how to handle wrong publication carefully.

Procedure:

1. Pause public release if an error is found.
2. Notify registry and reviewer roles.
3. Record the reason.
4. Correct the source record before re-issuing.
5. Do not silently overwrite official outputs.

Training example: The participant receives a training case related to reversal and correction. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Skipping the role boundary because the case looks simple.
2. Leaving the next action unclear.
3. Adding private details that the next role does not need.
4. Promising an outcome that belongs to another workflow.

11. Practice exercises

Exercise 1: Review a training case and state what information is missing.

Exercise 2: Explain which role should act next and why.

Exercise 3: Identify a phrase that could expose sensitive information and rewrite it.

Exercise 4: Prepare a short note that helps the next reviewer.

12. Common mistakes

1. Confuse review progress with final approval.
2. Repeat the same warning in several notes.
3. Leave the case without a clear next action.
4. Use technical language when a simple explanation is enough.
5. Store evidence outside the protected workflow.

13. Troubleshooting

1. If evidence is missing, return the case to the correct role.
2. If status does not match evidence, pause progress and ask for review.
3. If sensitive information appears, remove it from public text and escalate the case.
4. If unsure, do not force a decision; record the question.
5. If the system does not respond, keep the case identifier and contact authorized support.

14. Assessment checklist

1. The participant can explain the role.
2. The participant can complete the main workflow.
3. The participant recognizes sensitive data.
4. The participant keeps notes brief and useful.
5. The participant knows when to escalate.

15. Reference index

1. Authorized support: sections 4, 5, and related modules.
2. Location evidence: sections 4, 5, and related modules.
3. Official record: sections 4, 5, and related modules.
4. Public release lock: sections 4, 5, and related modules.
5. Ready for approval: sections 4, 5, and related modules.
6. Record history: sections 4, 5, and related modules.
7. Sensitive data: sections 4, 5, and related modules.

16. Support and contact

For help during the controlled pilot, contact the operational support team indicated by BeCore or by the institution responsible for the training.

When asking for help, include the case identifier if available, a short description of the problem, and the role you are working from. Do not include passwords or full sensitive data.

If the responsible institution issues an updated rule or procedure, that instruction takes priority.
