National Digital Addressing Platform

REGISTRY TRAINING

Registry Officer Manual

Manual for reviewing requests, preparing official records, and
maintaining registry workflow quality.

Document control page

Document title: Registry Officer Manual.

Language: English.

Audience: Registry operators who review submitted locations and prepare official records.

Status: Controlled pilot training material.

Prepared for: Equatorial Guinea National Digital Addressing pilot.

Operational support: BeCore.

Table of contents

- 1.** How to use this manual
- 2.** Audience and responsibilities
- 3.** Training outcomes
- 4.** Key terms
- 5.** Privacy and safety rules
- 6.** Module 1: registry queue overview
- 7.** Module 2: official record preparation
- 8.** Module 3: correction handling
- 9.** Module 4: quality checks
- 10.** Module 5: handoff and record history
- 11.** Practice exercises
- 12.** Common mistakes
- 13.** Troubleshooting
- 14.** Assessment checklist
- 15.** Reference index
- 16.** Support and contact

1. How to use this manual

This manual trains the registry officer to review submissions, check evidence, resolve obvious issues, and prepare records for authorized decision.

Use the manual in order during a guided session and later as a reference. Each module explains the main task, the correct steps, and the mistakes to avoid.

Examples are for training and do not replace future official instructions.

2. Audience and responsibilities

Registry operators who review submitted locations and prepare official records.

- 1.** Perform the assigned role without taking decisions that belong to another role.
- 2.** Use only the data needed for the work.
- 3.** Keep the difference between review, decision, and publication clear.
- 4.** Record observations briefly and verifiably.
- 5.** Escalate uncertainty instead of forcing an action.

3. Training outcomes

By the end of this manual, the participant should be able to:

- 1.** Explain the boundary of the role.
- 2.** Follow the correct daily workflow.
- 3.** Recognize sensitive information.
- 4.** Keep evidence or notes understandable.
- 5.** Know when to escalate a case.

4. Key terms

Official record: information reviewed inside the institutional workflow.

Ready for approval: status showing preparation for authorized decision.

Location evidence: information that helps confirm where a place is located.

Public release lock: control that prevents publication before authorization.

Record history: sequence of actions visible for review and audit.

5. Privacy and safety rules

Do not place passwords, full identity numbers, bank details, or unnecessary private information in notes, examples, or training screenshots.

Basic rules:

- 1.** Use real data only inside the protected system when the role requires it.
- 2.** Use fictional or approved examples in training.
- 3.** Do not share screenshots with private data.
- 4.** Do not copy protected information into public channels.
- 5.** If a situation is sensitive, ask a supervisor.

6. Module 1: registry queue overview

This module teaches how to read the review queue and separate simple cases from cases needing field checks.

Procedure:

1. Open the protected registry workflow.
2. Sort by status and risk.
3. Check submitted location details.
4. Confirm whether location evidence is present.
5. Send incomplete cases back for field check.

Training example: The participant receives a training case related to registry queue overview. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Skipping the role boundary because the case looks simple.
2. Leaving the next action unclear.
3. Adding private details that the next role does not need.
4. Promising an outcome that belongs to another workflow.

7. Module 2: official record preparation

This module teaches how to prepare clean records without publishing too early.

Procedure:

1. Confirm province and local area.
2. Check duplicate candidates.
3. Review address label and public-safe description.
4. Prepare the record for authorized decision.
5. Keep public release locked until approval.

Training example: The participant receives a training case related to official record preparation. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Skipping the role boundary because the case looks simple.
2. Leaving the next action unclear.
3. Adding private details that the next role does not need.
4. Promising an outcome that belongs to another workflow.

8. Module 3: correction handling

This module teaches how to review public corrections and internal edits carefully.

Procedure:

1. Compare correction request to existing record.
2. Check evidence before changing official fields.
3. Document the reason for the correction.
4. Avoid overwriting history.
5. Send unclear cases for supervisor review.

Training example: The participant receives a training case related to correction handling. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Skipping the role boundary because the case looks simple.
2. Leaving the next action unclear.
3. Adding private details that the next role does not need.
4. Promising an outcome that belongs to another workflow.

9. Module 4: quality checks

This module teaches how to catch errors before records move forward.

Procedure:

1. Check map point, address label, and local context together.
2. Review missing or inconsistent fields.
3. Check whether sensitive data appears in public text.
4. Confirm case history is understandable.
5. Mark unresolved blockers plainly.

Training example: The participant receives a training case related to quality checks. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Skipping the role boundary because the case looks simple.
2. Leaving the next action unclear.
3. Adding private details that the next role does not need.
4. Promising an outcome that belongs to another workflow.

10. Module 5: handoff and record history

This module teaches how to leave a clean trail for reviewers and auditors.

Procedure:

1. Write short review notes.
2. State what was checked.
3. State what remains unresolved.
4. Move the case to the correct next status.
5. Avoid private details in general notes.

Training example: The participant receives a training case related to handoff and record history. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Skipping the role boundary because the case looks simple.
2. Leaving the next action unclear.
3. Adding private details that the next role does not need.
4. Promising an outcome that belongs to another workflow.

11. Practice exercises

Exercise 1: Review a training case and state what information is missing.

Exercise 2: Explain which role should act next and why.

Exercise 3: Identify a phrase that could expose sensitive information and rewrite it.

Exercise 4: Prepare a short note that helps the next reviewer.

12. Common mistakes

1. Confuse review progress with final approval.
2. Repeat the same warning in several notes.
3. Leave the case without a clear next action.
4. Use technical language when a simple explanation is enough.
5. Store evidence outside the protected workflow.

13. Troubleshooting

1. If evidence is missing, return the case to the correct role.
2. If status does not match evidence, pause progress and ask for review.
3. If sensitive information appears, remove it from public text and escalate the case.
4. If unsure, do not force a decision; record the question.
5. If the system does not respond, keep the case identifier and contact authorized support.

14. Assessment checklist

1. The participant can explain the role.
2. The participant can complete the main workflow.
3. The participant recognizes sensitive data.
4. The participant keeps notes brief and useful.
5. The participant knows when to escalate.

15. Reference index

1. Authorized support: sections 4, 5, and related modules.
2. Location evidence: sections 4, 5, and related modules.
3. Official record: sections 4, 5, and related modules.
4. Public release lock: sections 4, 5, and related modules.
5. Ready for approval: sections 4, 5, and related modules.
6. Record history: sections 4, 5, and related modules.
7. Sensitive data: sections 4, 5, and related modules.

16. Support and contact

For help during the controlled pilot, contact the operational support team indicated by BeCore or by the institution responsible for the training.

When asking for help, include the case identifier if available, a short description of the problem, and the role you are working from. Do not include passwords or full sensitive data.

If the responsible institution issues an updated rule or procedure, that instruction takes priority.
