

REPUBLIC OF EQUATORIAL GUINEA

National Digital Addressing Platform

REPORTS AND AUDIT

Reports, Activity, and Audit Guide

Guide for reading reports, activity, readiness checks, and pilot
audit evidence.

Document control page

Document title: Reports, Activity, and Audit Guide.

Language: English.

Audience: Supervisors, reviewers, and BeCore operations staff who read reports and activity evidence.

Status: Controlled pilot training material.

Prepared for: Equatorial Guinea National Digital Addressing pilot.

Operational support: BeCore.

Table of contents

- 1.** How to use this manual
- 2.** Audience and responsibilities
- 3.** Training outcomes
- 4.** Key terms
- 5.** Privacy and safety rules
- 6.** Module 1: report overview
- 7.** Module 2: activity log review
- 8.** Module 3: readiness checks
- 9.** Module 4: safe exports
- 10.** Module 5: supervisor follow-up
- 11.** Practice exercises
- 12.** Common mistakes
- 13.** Troubleshooting
- 14.** Assessment checklist
- 15.** Reference index
- 16.** Support and contact

1. How to use this manual

This manual trains the reports reviewer to read reports, activity logs, readiness checks, and exports without confusing metrics with approval.

Use the manual in order during a guided session and later as a reference. Each module explains the main task, the correct steps, and the mistakes to avoid.

Examples are for training and do not replace future official instructions.

2. Audience and responsibilities

Supervisors, reviewers, and BeCore operations staff who read reports and activity evidence.

- 1.** Perform the assigned role without taking decisions that belong to another role.
- 2.** Use only the data needed for the work.
- 3.** Keep the difference between review, decision, and publication clear.
- 4.** Record observations briefly and verifiably.
- 5.** Escalate uncertainty instead of forcing an action.

3. Training outcomes

By the end of this manual, the participant should be able to:

- 1.** Explain the boundary of the role.
- 2.** Follow the correct daily workflow.
- 3.** Recognize sensitive information.
- 4.** Keep evidence or notes understandable.
- 5.** Know when to escalate a case.

4. Key terms

Official record: information reviewed inside the institutional workflow.

Ready for approval: status showing preparation for authorized decision.

Location evidence: information that helps confirm where a place is located.

Public release lock: control that prevents publication before authorization.

Record history: sequence of actions visible for review and audit.

5. Privacy and safety rules

Do not place passwords, full identity numbers, bank details, or unnecessary private information in notes, examples, or training screenshots.

Basic rules:

- 1.** Use real data only inside the protected system when the role requires it.
- 2.** Use fictional or approved examples in training.
- 3.** Do not share screenshots with private data.
- 4.** Do not copy protected information into public channels.
- 5.** If a situation is sensitive, ask a supervisor.

6. Module 1: report overview

This module teaches how to understand what reports can and cannot prove.

Procedure:

1. Read the report title and scope.
2. Check date or pilot period labels when provided.
3. Review summary counts first.
4. Open details only when needed.
5. Avoid treating counts as legal approval.

Training example: The participant receives a training case related to report overview. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Treating a metric count as proof of approval.
2. Copying internal identifiers into public summaries.
3. Ignoring warnings because the overall count looks positive.
4. Sending an export before reviewing the content.

7. Module 2: activity log review

This module teaches how to use activity records to understand who did what.

Procedure:

1. Read the action type.
2. Check the actor role.
3. Review the affected record.
4. Look for unusual sequences.
5. Do not publish internal identifiers.

Training example: The participant receives a training case related to activity log review. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Treating a metric count as proof of approval.
2. Copying internal identifiers into public summaries.
3. Ignoring warnings because the overall count looks positive.
4. Sending an export before reviewing the content.

8. Module 3: readiness checks

This module teaches how to interpret readiness without overclaiming.

Procedure:

1. Check pass, warning, and blocked items.
2. Read the reason for each warning.
3. Assign follow-up to the right role.
4. Do not hide blocked items.
5. Rerun checks after correction.

Training example: The participant receives a training case related to readiness checks. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Treating a metric count as proof of approval.
2. Copying internal identifiers into public summaries.
3. Ignoring warnings because the overall count looks positive.
4. Sending an export before reviewing the content.

9. Module 4: safe exports

This module teaches how to prepare report exports responsibly.

Procedure:

1. Select only approved export content.
2. Avoid private identity details.
3. Label controlled pilot material.
4. Review before sending.
5. Keep a record of distribution.

Training example: The participant receives a training case related to safe exports. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Skipping the role boundary because the case looks simple.
2. Leaving the next action unclear.
3. Adding private details that the next role does not need.
4. Promising an outcome that belongs to another workflow.

10. Module 5: supervisor follow-up

This module teaches how to turn report findings into action.

Procedure:

1. Summarize the issue simply.
2. Identify the responsible workflow.
3. Set a clear next action.
4. Track completion.
5. Avoid duplicate instructions across channels.

Training example: The participant receives a training case related to supervisor follow-up. They must follow the steps, explain the reason for each decision, and leave the case ready for the next role without adding unnecessary information.

Mistakes to avoid:

1. Skipping the role boundary because the case looks simple.
2. Leaving the next action unclear.
3. Adding private details that the next role does not need.
4. Promising an outcome that belongs to another workflow.

11. Practice exercises

Exercise 1: Review a training case and state what information is missing.

Exercise 2: Explain which role should act next and why.

Exercise 3: Identify a phrase that could expose sensitive information and rewrite it.

Exercise 4: Prepare a short note that helps the next reviewer.

12. Common mistakes

1. Confuse review progress with final approval.
2. Repeat the same warning in several notes.
3. Leave the case without a clear next action.
4. Use technical language when a simple explanation is enough.
5. Store evidence outside the protected workflow.

13. Troubleshooting

1. If evidence is missing, return the case to the correct role.
2. If status does not match evidence, pause progress and ask for review.
3. If sensitive information appears, remove it from public text and escalate the case.
4. If unsure, do not force a decision; record the question.
5. If the system does not respond, keep the case identifier and contact authorized support.

14. Assessment checklist

1. The participant can explain the role.
2. The participant can complete the main workflow.
3. The participant recognizes sensitive data.
4. The participant keeps notes brief and useful.
5. The participant knows when to escalate.

15. Reference index

1. Authorized support: sections 4, 5, and related modules.
2. Location evidence: sections 4, 5, and related modules.
3. Official record: sections 4, 5, and related modules.
4. Public release lock: sections 4, 5, and related modules.
5. Ready for approval: sections 4, 5, and related modules.
6. Record history: sections 4, 5, and related modules.
7. Sensitive data: sections 4, 5, and related modules.

16. Support and contact

For help during the controlled pilot, contact the operational support team indicated by BeCore or by the institution responsible for the training.

When asking for help, include the case identifier if available, a short description of the problem, and the role you are working from. Do not include passwords or full sensitive data.

If the responsible institution issues an updated rule or procedure, that instruction takes priority.
